DECLARATION

I, **JOHNY SARAVANAN**, hereby declare that the project entitled “**BLOOD BANK MANAGEMENT SYSTEM**” is submitted to Institute Of Human Recourses Development, in Partial fulfilment of the requirements for the award of **Post Graduate Diploma in Computer Application** is a record of original work done by me during the period of **COLLEGE OF APPLIED SCIENCE PEERMADE** under the supervision and guidance of **Mrs. Robiya G**, Assistant professor of the Department of Computer Science. This Project Work has not formed for the award of any degree or master degree similar title to any candidate of any university.

Johny Saravanan

(Regno: 251016)

ACKNOWLEDGEMENT

The satisfaction and euphoria that accompany the successful completion of any task would be incomplete without the mention of the people who made it possible. First of all, I would like to thank GOD almighty, without his help and blessing we could not have completed the project.

I deem it as pleasure to express our deep sense of the indebtedness and heartfelt thanks to the Principal **Mr. Sathish Varghese** College of Applied Science Kuttikkanam. I express our gratitude to **Mrs. Robiya G.** Head of the Department for being a constant source of inspiration throughout this work. . I Express heartfelt gratitude to our project guide **Mrs. Robiya G.** for her valuable contributions to the development on my project.

I extend our whole gratitude to all our friends who gave me valuable suggestions during the development of this project. Next, we would thank Microsoft for developing such a wonderful tool like MS Word. It helped our work a lot to remain error-free. Last but clearly not least, we would thank The Almighty for giving strength to complete our project report on time.

Thank you

Johny Saravanan

(Regno: 251016)

ABSTRACT

Blood Link is a Blood Bank Management System designed to address the inefficiencies of local blood donor coordination, including delayed communication, fragmented donor records, and dependence on manual register-based processes. In emergency situations, these limitations often hinder the timely availability of compatible blood units and reduce the responsiveness of blood banks, hospitals, and donors. The proposed solution digitalizes donor registration, blood request handling, inventory tracking, and approval workflows into a centralized web platform. Blood Link enables role-based access for donors, hospitals, blood banks, and administrators, thereby improving transparency, traceability, and operational efficiency. The system is developed using the Django web framework, with Python as the backend language, SQLite as the database, and HTML, CSS, and JavaScript for the user interface. The platform structure supports scalable management of donor data, request processing, and status monitoring, making blood coordination more reliable and accessible.
